

PMMA COPINGS & SHADED TEMPORAIRES FROM CADD LABORATORIES

CADD Laboratories is pleased to offer PMMA Copings, a stronger and more economical alternative to the standard wax-up process.

Stronger than conventional acrylic restorations and more stable than regular wax material, PMMA Copings substantially reduces your gold cost by offering 100% castability.

CADD-PMMA Copings provides for precise margins with a perfect fit for both copings and full anatomical wax crowns. The product is also capable of sharp knife edge margins and is available in all shades.

CADD-Shaded Temporaries

Manufactured out of a single, pre-shaded block of PMMA, CADD Laboratories provides excellent craftsmanship and quick turnaround on your provisional restorations.

Once your dentist is satisfied with the provisional product, we are able to duplicate the dimensions for their final restorations. Once the piece is in your lab, you are able to make small adjustments and polish it quickly to meet the needs of your dentist.
